Our solid oak parquet has a thickness of 27 mm and a size of 950 x 950 mm. Its easy handling during installation is especially outstanding.

A half-turn of the socket spanner only is required to connect the single floor elements in a secure and solid manner.

Further to its grooved surface, the bevelled edging disposes of excellent anti slip properties. It is made from gold-anodized light metal. By means of the socket spanner, it is mounted on the outer edges of the elements.

25 floor elements including edges can be moved and stored in a space-saving manner by means of the transport trolley.
